NeoColab_REC_CS23231_DATA STRUCTURES

REC_DS using C_Week 1_MCQ

Attempt : 1 Total Mark : 10 Marks Obtained : 0

Section 1: MCQ

1. The following function reverse() is supposed to reverse a singly linked list. There is one line missing at the end of the function.

What should be added in place of "/*ADD A STATEMENT HERE*/", so that the function correctly reverses a linked list?

```
struct node {
  int data;
  struct node* next;
};
static void reverse(struct node** head_ref) {
  struct node* prev = NULL;
  struct node* current = *head_ref;
  struct node* next;
  while (current != NULL) {
    next = current->next;
}
```

```
current->next = prev;
prev = current;
current = next;
}
/*ADD A STATEMENT HERE*/
}
Answer
```

Status: Skipped Marks: 0/1

2. The following function takes a singly linked list of integers as a parameter and rearranges the elements of the lists.

The function is called with the list containing the integers 1, 2, 3, 4, 5, 6, 7 in the given order. What will be the contents of the list after the function completes execution?

```
struct node {
      int value;
      struct node* next;
    };
    void rearrange (struct node* list) {
      struct node *p,q;
     int temp;
      if (! List || ! list->next) return;
      p=list; q=list->next;
      while(q) {
         temp=p->value; p->value=q->value;
         q->value=temp;p=q->next;
         q=p?p->next:0;
      }
    }
    Answer
Status: -
```

Marks : 0/1

it has its representation	with a head pointer o	nly. Given the repres	entation,
i) Insertion at the front o	f the linked list		
ii) Insertion at the end of	the linked list		
iii) Deletion of the front r	node of the linked list		
iv) Deletion of the last no	ode of the linked list

6. Linked lists are not s	uitable for the implen	nentation of?	
Answer			
	it has its representation which of the following of i) Insertion at the front of ii) Insertion at the end of iii) Deletion of the front rown iv) Deletion of the last not answer - Status: - 4. In a singly linked list, Answer - Status: - 5. Given the linked list: output of traversing the linked list: output of traversing the linked list: - Status: - 6. Linked lists are not single linked	it has its representation with a head pointer of which of the following operations can be implicitly in the following operations can be implicitly intended by intended the following operations can be implicitly intended by intended the following operations can be implicitly intended by intended the following operations can be implicitly intended by intended the following operations can be implicitly intended by intended the following operations can be implicitly intended by intended the following operations can be implicitly intended by intended the following operations can be implicitly intended by intended the following operations can be implicitly intended by intende	ii) Insertion at the end of the linked list iii) Deletion of the front node of the linked list iv) Deletion of the last node of the linked list Answer - Status: - 4. In a singly linked list, what is the role of the "tail" node? Answer - Status: - 5. Given the linked list: 5 -> 10 -> 15 -> 20 -> 25 -> NULL. What will output of traversing the list and printing each node's data? Answer - Status: - 6. Linked lists are not suitable for the implementation of?

7. Which of the following statements is used to create a new node in a singly linked list?

```
struct node {
  int data;
  struct node * next;
}
typedef struct node NODE;
NODE *ptr;

```

Status : - Marks : 0/1

8. Given a pointer to a node X in a singly linked list. If only one point is given and a pointer to the head node is not given, can we delete node X from the given linked list?

Answer

-

Status: - Marks: 0/1

9. Consider the singly linked list: 15 -> 16 -> 6 -> 7 -> 17. You need to delete all nodes from the list which are prime.

What will be the final linked list after the deletion?

Answer

-

Status: - Marks: 0/1

10. Consider the singly linked list: $13 \rightarrow 4 \rightarrow 16 \rightarrow 9 \rightarrow 22 \rightarrow 45 \rightarrow 5 \rightarrow 16 \rightarrow 6$, and an integer K = 10, you need to delete all nodes from the list that are less than the given integer K.

What will be the final linked list after the deletion?

Answer Answer Marks : 0/1 Status: -
